

# Evidence Based Practice Training:

## Time Delay (TD)

Adapted from Sam, A., & AFIRM Team. (2015). *Time Delay*. Chapel Hill, NC: National Professional Development Center on Autism Spectrum Disorder, FPG Child Development Center, University of North Carolina. Retrieved from <https://afirm.fpg.unc.edu/time-delay>

# What is CAPTAIN

The California Autism Professional Training And Information Network (CAPTAIN) is an interagency network developed to support the understanding and use of evidence based practices (EBPs) for individuals with Autism across the state of California.

[www.captain.ca.gov](http://www.captain.ca.gov)

# What is CAPTAIN

Marin County SELPA in partnership with CAPTAIN, are members of the Statewide System of Support as a Special Education Content Lead for Autism.

This project is funded by the California Department of Education and the California Collaborative for Educational Excellence.

[www.captain.ca.gov](http://www.captain.ca.gov)

# Levels of Professional Development to Reach Implementation

This is a Workshop/Training and is designed to increase your KNOWLEDGE of the topic. Implementation supports to assist you with use of this EBP will be outlined following the TRAINING/WORKSHOP

# Before We Begin...

Please complete the **Pre Training Survey**  
sent to your email

[www.captain.ca.gov](http://www.captain.ca.gov)

# Learning Objectives

- Describe what EBPs are
- Develop knowledge about Time Delay as an evidence based practice for skills teaching
- Describe the two different types of time delay procedures in preparation for using them in practice

# What are Evidence Based Practices?

NCAEP definition of an EBP:

“Focused intervention practices that have evidence of efficacy in promoting positive outcomes for learners with ASD.”

Steinbrenner, J. R., Hume, K., Odom, S. L., Morin, K. L., Nowell, S. W., Tomaszewski, B., Szendrey, S., McIntyre, N. S., Yücesoy-Özkan, S., & Savage, M. N. (2020). Evidence-based practices for children, youth, and young adults with Autism. The University of North Carolina at Chapel Hill, Frank Porter Graham Child Development Institute, National Clearinghouse on Autism Evidence and Practice Review Team.

[www.captain.ca.gov](http://www.captain.ca.gov)

# Evidence Based Practice Matrix (28 EBPs)

Table 3.7 Matrix of evidence-based practices, outcomes, and age categories

Evidence-Based Practices See Table 3.1 to link abbreviations to EBPs	Academic/Pre-academic			Adaptive/Self-help			Challenging/Interfering behavior			Cognitive			Communication			Joint attention			Mental health			Motor			Play			School readiness			Self-determination			Social			Vocational		
	0-5 years	6-14 years	15-22 years	0-5 years	6-14 years	15-22 years	0-5 years	6-14 years	15-22 years	0-5 years	6-14 years	15-22 years	0-5 years	6-14 years	15-22 years	0-5 years	6-14 years	15-22 years	0-5 years	6-14 years	15-22 years	0-5 years	6-14 years	15-22 years	0-5 years	6-14 years	15-22 years	0-5 years	6-14 years	15-22 years	0-5 years	6-14 years	15-22 years

# Selecting EBPs

Before beginning a new practice with a learner, it is important to follow four planning steps

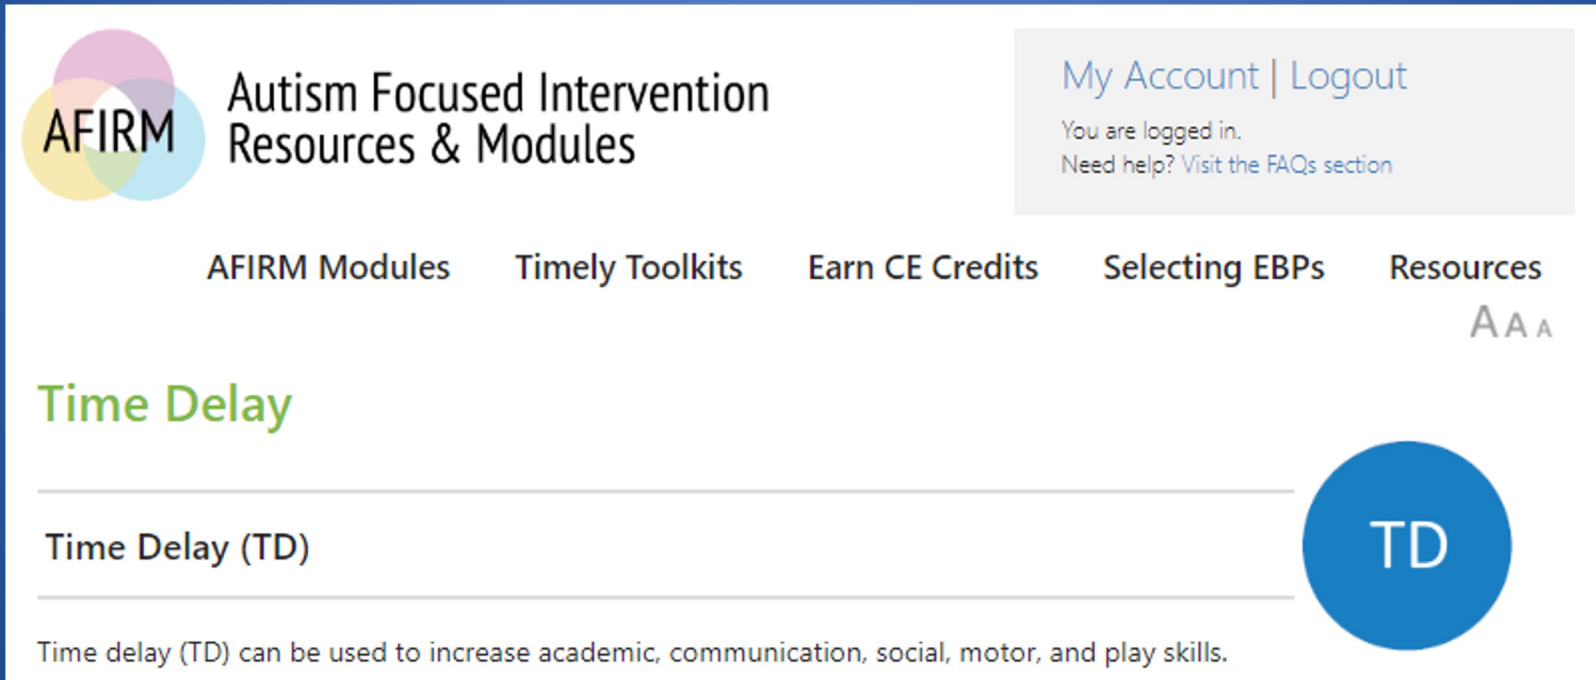

1. Identify the behavior
2. Collect baseline data on the behavior
3. Establish an observable and measurable goal
4. Choose an EBP
  - Consider the child and family characteristics
  - Consider the teacher and team characteristics
  - Consider other available resources

# High Quality Training:

## Autism Focused Intervention Resources and Modules (AFIRM)

Designed to help you learn the step-by-step process of planning for, using, and monitoring EBPs with learners with Autism from birth to 22 years of age

The screenshot shows the AFIRM website interface. At the top left is the AFIRM logo, a Venn diagram with three overlapping circles in pink, yellow, and blue, with the text 'AFIRM' overlaid. To the right of the logo is the text 'Autism Focused Intervention Resources & Modules'. In the top right corner, there is a grey box containing 'My Account | Logout', 'You are logged in.', and 'Need help? Visit the FAQs section'. Below the header is a navigation bar with the following items: 'AFIRM Modules', 'Timely Toolkits', 'Earn CE Credits', 'Selecting EBPs', and 'Resources'. To the right of the navigation bar are three small 'A' icons for font size adjustment. The main content area features the title 'Time Delay' in green text. Below the title is a horizontal line, followed by the text 'Time Delay (TD)'. To the right of this text is a large blue circle containing the white letters 'TD'. At the bottom of the content area, there is a paragraph: 'Time delay (TD) can be used to increase academic, communication, social, motor, and play skills.'

Name of EBP		Time Delay (TD)					
Definition of EBP		Time delay (TD) is a practice used to systematically fade the use of prompts during instructional activities. With this procedure, a brief delay is provided between the initial instruction and any additional instructions or prompts. The evidence-based research focuses on two types of time delay procedures: progressive and constant. With progressive time delay, the practitioner gradually increases the waiting time between an instruction and any prompts that might be used to elicit a response from a learner. As the learner becomes more proficient at using the skill, the practitioner gradually increases the waiting time between the instruction and the prompt. In constant time delay, a fixed amount of time is always used between the instruction and the prompt as the learner becomes more proficient at using the new skill. Time delay is always used in conjunction with a prompting procedure (e.g., least-to-most prompting, simultaneous prompting, graduated guidance).					
Outcome Areas		Age Ranges					
		0-2	3-5	6-11	12-14	15-18	19-22
		Toddlers	Preschoolers	Elementary School	Middle School	High School	Young Adults

(Steinbrenner, 2020)

# Think - Pair - Share

Do any of your student appear to be “Prompt Dependent?” Describe what this looks like.....

# Time Delay:

- A prompting procedure that systematically fades prompts during instructional activities
- A foundational practice that is used along with these other evidence-based practices including prompting and differential reinforcement

# Why Use Time Delay?

- Time delay is associated with low error rates during instructional activities, because the use of controlling prompts results in near-errorless learning
- Time delay procedures can be used throughout the day in both individual and small group instructional activities

# Skills That Can Be Taught Using Time Delay

- Academic skills (multiplication facts, sight word reading, letter/number identification)
- Language and communication (e.g. requests, signs)
- Social skills (greeting adults/peers, exchanging materials)
- Motor skills (riding a bike, throwing a ball)
- Play skills (pretend play)

# Example of How Time Delay Can Be Used

# Steps for Using Time Delay

Time Delay (TD) ---Implementation Checklist---					
<p><i>Before you start:</i></p> <p><i>Have you...</i></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Identified the behavior?</li> <li><input type="checkbox"/> Collected baseline data through direct observation?</li> <li><input type="checkbox"/> Established a goal or outcome that clearly states when the behavior will occur, what the target skill is, and how the team will know when the skill is mastered.</li> </ul> <p><i>If the answer to any of these is "no", refer to the "Selecting EBPs" section on the website.</i></p>	Observation	1	2	3	4
	Date				
	Observer's Initials				
<b>Step 1: Planning</b>					
1.1 Assess learner's current abilities					
1.2 Select target stimulus and cue					
1.3 Select controlling prompt					
1.4 Select reinforcers					
1.5 Identify times and activities for using time delay					
1.6 Determine time delay procedure					
<b>Step 2: Using</b>					
2.1 Establish learner attention and provide cue					
2.2 Deliver controlling prompt					
2.3 Increase time delay					
2.4 Respond to learner's attempts					
<b>Step 3: Monitoring</b>					
3.1 Collect and analyze data on target behaviors					
3.2 Determine next steps based on learner progress					

AFIRM Autism Focused Intervention Resources and Modules

# Prerequisite Skills Needed to Benefit from Time Delay

Assess the learner's current abilities:

Ability	Prerequisite	Yes	No
Responding to instructional cues	When a cue or attention-getting strategy is used, is the learner able to look in the appropriate direction (at adult)?		
Wait	Is the learner able to wait for approximately four seconds for a prompt if s/he is not certain of the correct response?		
Imitate others	Is the learner able to imitate others when a model is provided?		
Stay seated	Is the learner able to stay at an activity for 5 to 10 minutes?		
Reinforcement	Does the learner have a history of using behaviors more frequently after appropriate reinforcers have been provided?		
Follow one-step instructions	Is the learner able to follow simple, one-step instructions?		

If the answer to any of these questions is 'no', time delay might not be an appropriate evidence-based practice to use with this learner. Refer to the online module for more information or select a new practice.

# Using Time Delay

- Adults identify the Target Stimulus that they ultimately want the learner to respond independently to
- Adults provide a controlling prompt (prompt which ensures learner will use the target skill) before learner responds
- Time Delay reduces errors and increases reinforcement opportunities

Let's  
Practice!

# Identify the Target Stimulus

TARGET BEHAVIOR	TARGET STIMULUS
LEARNER GREETES A PEER BY SAYING, "HELLO."	Presence of a peer
LEARNER READING WORDS.	
LEARNER WASHES HANDS.	

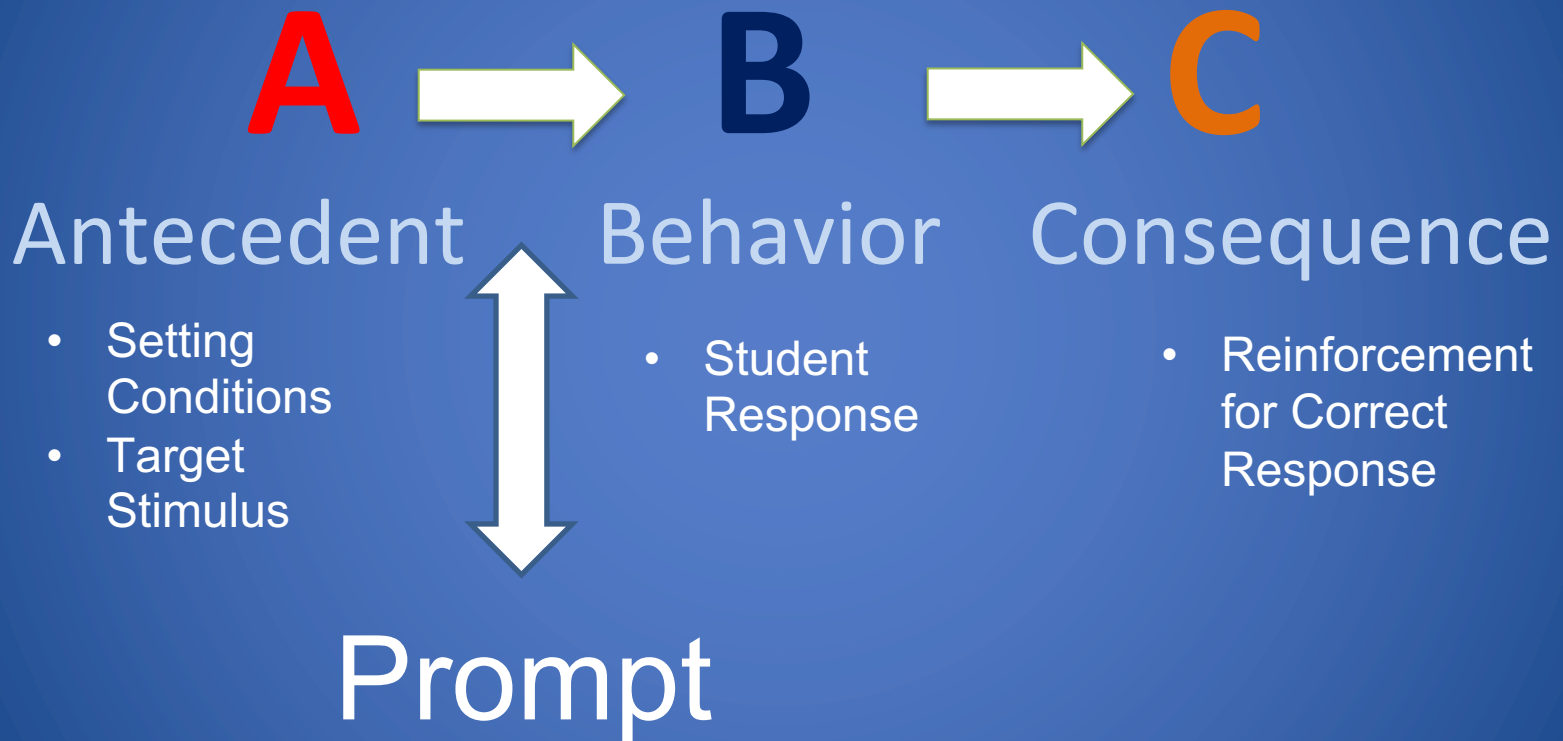

What is the target stimulus that should set up reading words and hand washing?

# Identify the Controlling Prompt

- The Controlling prompt is the prompt that is highly likely to get the student to perform the correct behavior or skill
- It should be the least intrusive prompt that **ALWAYS** works
- You will be fading the prompt quickly using the identified Time Delay procedure

**Prompts = Physical, Gestural, Modeling,  
Visual/Picture, Verbal**

# When Does A Prompt Happen?

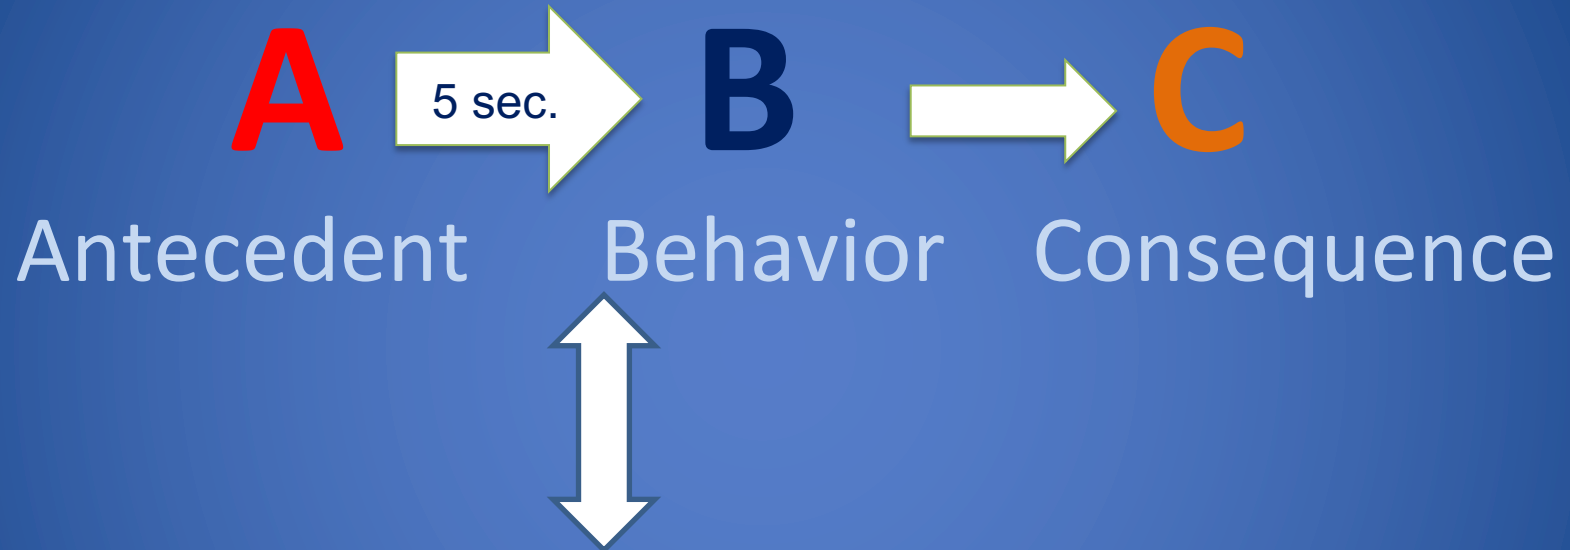

# Two Type of Time Delay Procedures

PROCEDURE	DESCRIPTION
<b>CONSTANT TIME DELAY (CTD)</b>	<p>When beginning to teach a target skill/behavior using CTD, provide a 0-second delay (no delay) between the cue and prompt. Model prompts are the most common prompt type to use with this procedure.<sup>7</sup> After a minimum of two trials using the 0-second delay, adults use a fixed amount of time between the cue and the controlling prompt (typically 3-5 seconds). This delay allows learners to acquire a new skill without becoming prompt dependent.<sup>8-9</sup></p>
<b>PROGRESSIVE TIME DELAY (PTD)</b>	<p>Like CTD, adults use a 0-second delay when first teaching a target skill/behavior. Then, adults gradually increase the wait time rather than using a fixed time interval. The delay is usually increased to a 5 second interval, but can be as much as 10 seconds.</p>

# Constant Time Delay

Constant Time Delay: Prompt always occurs after a set interval of time.

# Example of Constant Time Delay

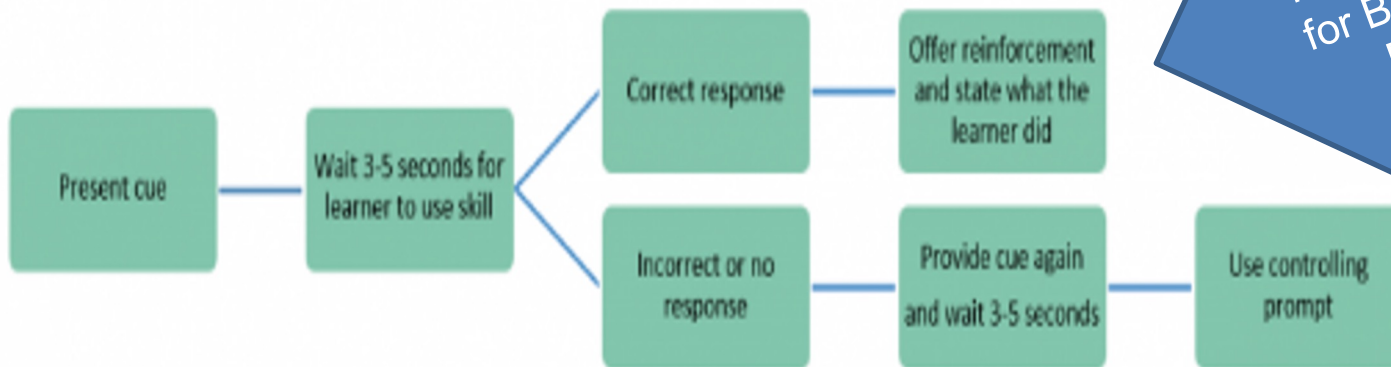

**AFIRM**

Autism Focused Intervention  
Resources and Modules

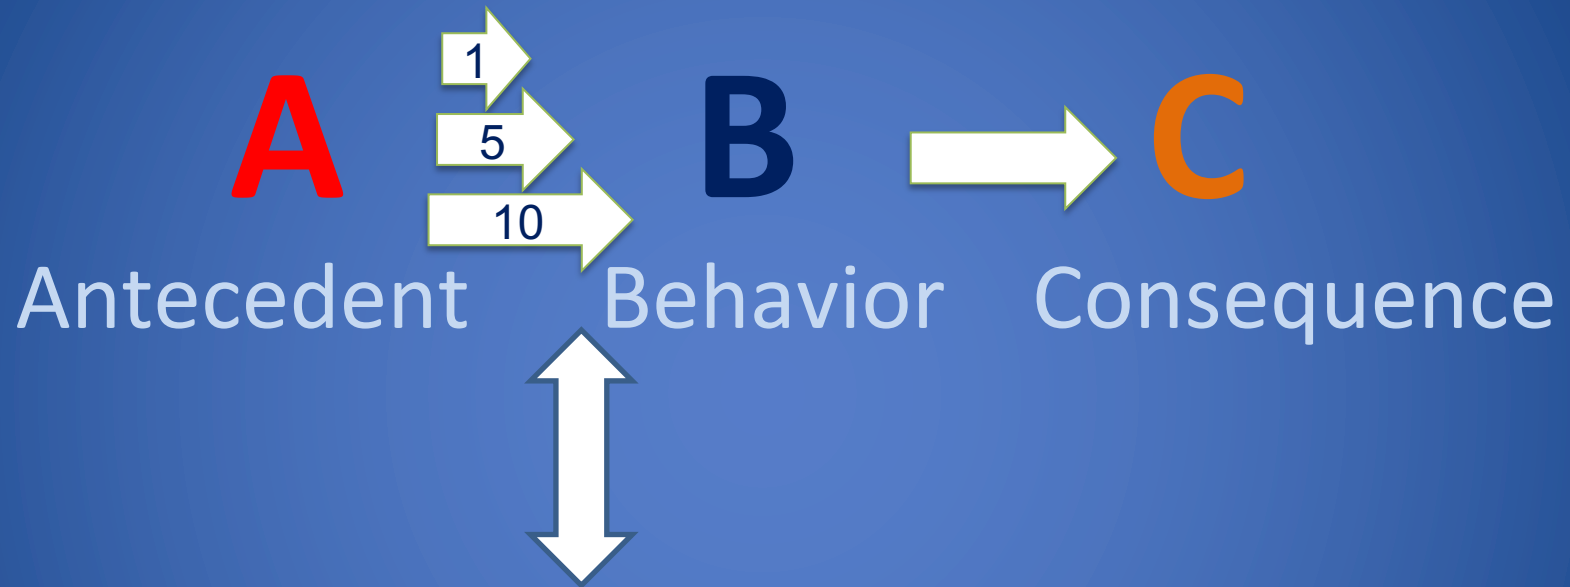

# Consequence: How To Respond to Student Using Constant Time Delay Procedure

Constant Time Delay (after the predetermined 0-second delay trials):

Use Differential Reinforcement for Beating the Prompt

# Progressive Time Delay

Progressive Time Delay: Amount of time between the target stimulus and the prompt gradually increases.

# Consequence: How To Respond to Student Using Progressive Time Delay Procedure

Progressive Time Delay (after the predetermined 0-second delay trials):

Use Differential Reinforcement for Beating the Prompt

# Always Start With a Zero Second Delay

Zero Second Delay: Immediately provide the controlling prompt (0 second delay) after the target stimulus is presented.

Let's  
Practice!

## Checking In

Brian is working on single digit addition. His cue is a flashcard with an addition problem on the card ( $1+5=$ ). He sometimes will get the answer if you wait for 3 seconds.

How long should his teacher wait before providing the controlling prompt when first using time delay?

- ▶ 0 seconds
- ▶ 1 second
- ▶ 2 seconds
- ▶ 3 seconds

# Monitor Student Responding

LEARNER RESPONSE	DESCRIPTION
UNPROMPTED CORRECT RESPONSE	Learner uses the target skill/behavior correctly without prompts within the time delay interval.
PROMPTED CORRECT RESPONSE	Learner uses the target skill/behavior correctly after being prompted.
UNPROMPTED INCORRECT RESPONSE	Learner attempts to use the target skill/behavior without prompts within the time delay interval, but performs it incorrectly.
PROMPTED INCORRECT RESPONSE	Learner attempts to use the target skill/behavior after being prompted, but performs it incorrectly.
NO RESPONSE	Learner does not initiate use of the target skill during the time delay interval.

# Collect Data To Determine if TD is Working

Time Delay

**---Data Collection---**

Learner's Name: \_\_\_\_\_ Date/Time: \_\_\_\_\_

Observer(s): \_\_\_\_\_

Target Behavior(s): \_\_\_\_\_

**Data Collection:**

Use this form when collecting data on time delay procedures. Remember to collect data on skills/behavior completed correctly with prompts and without prompts.

Target Skill:					
Controlling Prompt:					
Date:		Delay:		Date:	
Trial #	Before Prompt	After Prompt	Trial #	Before Prompt	After Prompt
1			1		
2			2		
3			3		
4			4		
5			5		
6			6		
7			7		
8			8		
9			9		
10			10		

+ = performed correct; - = performed incorrectly; 0=no response

# Troubleshooting

If the learner with ASD is not showing progress with time delay, ask yourself the following questions:

- Is the target skill or behavior well defined?
- Is the skill or behavior measurable and observable?
- Is the skill too difficult and needs to be broken down into smaller steps?
- Has enough time been devoted to using this practice?
- Was time delay used with fidelity based upon the implementation checklist?
- Does the learner have the prerequisite skills and abilities for time delay?
- Are reinforcements used that are motivating to the learner?
- Are team members responding to the learner's attempts appropriately?

# My Takeaways

1. What are 4 things you remember from today's training?
1. What are 2 things you see yourself doing?
1. What is the 1 thing you can implement tomorrow?

# Next Steps

Time Delay (TD)  
---Implementation Checklist---

	Observation	1	2	3	4
	Date				
	Observer's Initials				
<b>Step 1: Planning</b>					
1.1 Assess learner's current abilities					
1.2 Select target stimulus and cue					
1.3 Select controlling prompt					
1.4 Select reinforcers					
1.5 Identify times and activities for using time delay					
1.6 Determine time delay procedure					
<b>Step 2: Using</b>					
2.1 Establish learner attention and provide cue					
2.2 Deliver controlling prompt					
2.3 Increase time delay					
2.4 Respond to learner's attempts					
<b>Step 3: Monitoring</b>					
3.1 Collect and analyze data on target behaviors					
3.2 Determine next steps based on learner progress					

**Before you start:**

**Have you...**

- Identified the behavior?
- Collected baseline data through direct observation?
- Established a goal or outcome that clearly states **when** the behavior will occur, **what** the target skill is, and **how** the team will know when the skill is mastered.

*If the answer to any of these is "no", refer to the "Selecting EBPs" section on the website.*
